EMWIN SOFTWARE

Warren Holman- Global Head of Sales

Company Description:

Totally integrated ERP cloud solution developed for the construction industry. Developed over 40 years by construction experts who understands the challenges within the industry, allowing you to have proper downstream controls over multiple projects, from Estimation through to final account, including payroll and Time and attendance- all on one platform. 40 years in the market gives us longevity, our solution gives us credibility.

Build with Earth-Moving, Winning Innovative, Nifty, cloud-based, construction software. Emwin- putting you in control of the cost.

When did you join L2B & Why?

We joined L2B recently, but have been a user of the product for many years at a previous employer.

What do you enjoy most about L2B?

Having a look at the products that are available, L2B is the most accurate and updated system to track projects and gather leads, EMWIN use it to find new projects where we could potentially implement our software and save our clients time and money by protecting their unprotected margins.

Favourite part of being involved in the Construction Industry?

My biggest fascination within the construction industry is the fast-paced, ever changing challenges that a contractor has to face on a daily basis and how our software can help them manage the uncontrollable on site with live, real-time information and reports.

Something Lighthearted to Finish ...

I am afraid of heights. My career in construction started in the roof industry and I used to work with a colleague who was as agile and as afraid as a mountain goat, as well as sure footed as one. We needed to go and measure a site and needed to walk on the roof purlins about 10 metres above ground, needless to say, a job that would have taken 20 minutes to measure took about the whole day. Picture me, on a purlin, flat on my stomach, moving at the speed of a slug!
