CoreSlab (Pty) Ltd

Manufacturers of Hollow-Core Slabs

CORESLAB

and Related Concrete Products

Product Range:

Coreslab manufactures the following precast-concrete products and systems: Suspended precast-concrete slabs, counting: Hollow-core slabs and Rib-and-block; High-strength retaining walls; Bridge beams and culverts; Stadia; Reservoirs and Bespoke prefabricated concrete items.

The design and installation of these products and systems are undertaken by Corestruc, a Coreslab sister company.

Industries You Market Your Products to?

Coreslab manufactures precast-concrete systems for the following market segments: Private home builders and their professional teams; Large property developments, including: Residential, Industrial, Commercial and Hospitality. We also supply Social infrastructure, including: Healthcare, Education, Low-cost housing, and Student accommodation developments. This is in addition to public and private sector civil-engineering infrastructure.

Where Your Products are used:

Our suspended slab solutions, in particular our hollow-core slabs, have been successfully deployed on multi-storey housing, hotel and mall projects. This is in addition to various industrial, as well as social infrastructure projects. Our reservoir system has been used by many municipalities to fast-track the construction of bulk water supply infrastructure. Coreslab's stadium system is used widely by local and provincial authorities to accelerate the construction of sports and recreational centres. We also supply bridge beams for civil-engineering construction projects.

How Your Company makes use of L2B's Services?

Coreslab uses L2B for project leads, to track the progress of projects from the conceptualisation stages to a shovel-ready state and to inform its own market research.

Benefits & Points of Differentiation: What Makes Your Products Unique?

Coreslab has a more than a 11-year-long legacy designing and manufacturing precast-concrete products and systems. Our products are manufactured to the highest quality standards. Corestruc undertakes the design and engineering, as well as installation of the systems. The company is supported by the transport and lifting divisions on projects.
