About Rho-Tech

No task is too small for our attention and no detail is too extravagant. This mantra as well as our integrity is what we live by and it serves us well. Our client portfolio is made up of both local and international players, these include major manufacturing, mining, construction and infrastructure companies as well as municipalities. From water to sewage, gas reclamation, effluent, chemical and even pharmaceutical, we are proud to say the list continues. We are flexible in our approach and we understand that each project is unique. Whether your assignment requires us to act as an agent/principle or if you need us to undertake your venture as a sub-contractor, Rho-Tech is undoubtedly the name you can trust.

What makes Rho-Tech different?

Our name is synonymous with the use of high quality products, integrity, expertise & experience for all HDPE piping systems. From being a humble team headed up by sole-owner Stan Whiting in 1993, to a structured company with a portfolio of Blue Chip and JSE-listed clients today. We continue to go from strength to strength with the mind set that, not even the sky is the limit. Despite the challenging economic climate globally, we have experienced tremendous growth over the past two decades. This is testimony that our commitments to the quality and service that we provide, determine our success.

Industries Rho-Tech markets to:
